**FOR IMMEDIATE RELEASE**

**EURAMAX CANADA INTRODUCES  
HEAVY-DUTY S-RAIL®, E-RAIL®, AND F-RAIL®  
SNOW RETENTION SYSTEMS**

**Barrie, ON, April 1, 2009.**

**Euramax Canada, Inc. introduces heavy-duty snow rail systems designed for standing seam metal roofs. As snow and ice accumulates on a roofs surface, even slight temperature changes can cause the snow and ice to avalanche off of the roof. The proper snow retention system can slow down the momentum of the snow and ice and help prevent extensive damage to property or pedestrians below.**

**Euramax Canada's snow rail is the only multiple rail option with coverage below the height of the standing seam. Choose S-Rail for low-profile coverage requiring only 1-Rail. For moderate snow loads, E-Rail will accommodate 1-2 Rails. For the most extreme snow loads, F-Rail can provide maximum protection with 2-3 rails. All of the castings are mill finished aluminum non-penetrating mounting devices that can also be custom painted.**

**Euramax Canada – your new choice for snow retention, residential & commercial products. For information or a catalogue, call us at 800-461-5706.**
